

Perspective fort the future

Operation and Maintenance

Great effort and hard work have been put into the development of walchfenster04 products to create the cutting edge windows and doors offered by our company. To ensure the longest possible life cycle time proper maintenance is required. Please follow these instructions to make sure you can enjoy the products as long as possible.

Cleaning Instructions

The wood and the glass components can be cleaned with water and light household detergents. In case the above mentioned detergents can not properly clean the window, use diluted spiritus, diluted with water with a relation of one part to ten. Aggressive detergents, which could damage glass or wooden components, should be avoided.

Hardware and Seal

To guarantee the proper functionality yearly inspection is recommended.

Special attention should be given to components relevant to human safety. Proper installation and wear should be checked regularly. In case of wear or improper installation, which could lead to dangerous situations, bad components must be replaced or repaired.

Movable parts must be greased regularly, with technical joint grease.

It is forbidden to paint over hardware and seals. In case of improper functioning please seek the help of a professional and do not try to repair the components using brute force.

Seals can be cleaned along with the window frame, to remove dust, and ensure proper fitting. It helps to grease seals with silicon oil to avoid the seal sticking to the frame.

Airing

Proper airing enhances the atmosphere inside a room, and is good for your health and the substance of the building. Airing insures a circulation of the air and stabilizes humidity. It decreases the required heating energy and reduces the risk of mould.

We recommend short intervals, depending on the size of the room to be aired, in which all windows are opened wide. In the colder season the airing duration can be reduced due to the low humidity content of the outside air.

Electrical Components

Electrical Components should be checked on a monthly basis. Once a year they should be maintained by professional service personnel. This ensures a long duration of usage of electrical components. Professional service should always be documented. The risk of damage by professional service personnel should be minimized by checking the condition of the window before and after the service.

Warranty

Walch GmbH will not cover any damage costs caused by excessively high humidity in construction material, improper installation or usage. Any damage caused by weather or deliberate damaging will not be covered. If the product remains on the construction site for a long period of time before installation, it must be stored in a way that will not damage any part of the product or its functionality. In case any components of the products are altered warranty ends.

We hope you enjoy the windows and doors purchased from Walch GmbH.
